Art Unit: 2852

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

IN THE TITLE:

The title has been changed to --Developing Device Using Specific Charging Unit For Charging Toner And Image Forming Device Adopting The Same --.

IN THE SPECIFICATION:

On page 5, line 10, "Disclosure of Invention" has been changed to --Summary of the Invention --;

On page 13, lines 16 and 17, "developing roller 12" has been changed to --supply roller 12--.

IN THE CLAIMS:

In claim 1, line 1, "The" has been changed to --A--.

2. The following is an examiner's statement of reasons for allowance:

The applicant claims a developing device comprising a unique charging means for charging toner (target material) comprising a light irradiating means, a photoelectron emission means provided between the light emission means and target material wherein an aperture is formed through the photoelectron emission means having its inner surface curved convexly outward to the side that the light

irradiation means is located which is not disclosed or rendered obvious by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Toizumi et al., Kamimura et al. '350, Kamimura et al. '892, and Kamimura et al. '346 are by the same assignee and/or applicant and all disclose charging means in a developing device using a photoemission device. It is noted that an aperture in the photoemission device having its inner surface curved convexly outwardly is not taught. McFarlane, Jr. et al. and Pressman et al. teach systems for charging toner particles using photoemission however, again, an aperture in the photoemission device having its inner surface curved convexly outwardly is not taught.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert Beatty whose telephone number is (571) 272-2130. The examiner can normally be reached on M-F from 9 to 6.
